## DM7490A

## Decade and Binary Counter

## General Description

The DM7490A monolithic counter contains four master－ slave flip－flops and additional gating to provide a divide－by－ two counter and a three－stage binary counter for which the count cycle length is divide－by－five．
The counter has a gated zero reset and also has gated set－ to－nine inputs for use in BCD nine＇s complement applica－ tions．
To use the maximum count length（decade or four－bit binary），the $B$ input is connected to the $Q_{A}$ output．The input count pulses are applied to input $A$ and the outputs

## Connection Diagram

are as described in the appropriate truth table．A symmetri－ cal divide－by－ten count can be obtained from the counters by connecting the $Q_{D}$ output to the $A$ input and applying the input count to the $B$ input which gives a divide－by－ten square wave at output $Q_{A}$ ．

Note 4: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.
Note 5: $\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$ and $\mathrm{V}_{\mathrm{CC}}=5 \mathrm{~V}$.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
