**Description**

RHRU5040, RHRU5050 and RHRU5060 (TA49065) are hyperfast diodes with soft recovery characteristics ( $t_{RR} < 45\text{ns}$ ). They have half the recovery time of ultrafast diodes and are silicon nitride passivated ion-implanted epitaxial planar construction.

These devices are intended for use as freewheeling/clamping diodes and rectifiers in a variety of switching power supplies and other power switching applications. Their low stored charge and hyperfast soft recovery minimize ringing and electrical noise in many power switching circuits reducing power loss in the switching transistors.

$R_{\theta JC}$  = Thermal resistance junction to case.

$E_{AVL}$  = Controlled avalanche energy (See Figures 10 and 11).

$pw$  = pulse width.

$D$  = duty cycle.

$V_1$  AMPLITUDE CONTROLS  $I_F$   
 $V_2$  AMPLITUDE CONTROLS  $dI_F/dt$

$L_1$  = SELF INDUCTANCE OF  
 $R_4 + L_{LOOP}$
