Transistors

Digital transistors (built-in resistors) DTA143EE / DTA143EUA / DTA143EKA / DTA143ECA / DTA143ESA

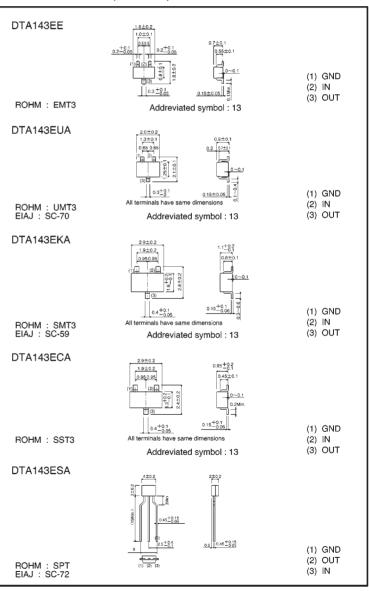

Features

- Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors (see equivalent circuit).
- The bias resistors consist of thinfilm resistors with complete isolation to allow positive biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
- Only the on/off conditions need to be set for operation, making device design easy.
