## Home Stereo Single-Chip Tuner IC with Electronic Tuning Support

### Overview

The LA1835 is an AM, FM IF and MPX single-chip tuner IC that supports electronic tuning. It was developed specifically for use in home stereo products and is optimal for products with auto-seek systems, since it combines SD and IF counting in its auto-seek implementation. Furthermore, since the FM detector and MPX VCO circuits are adjustment free, adoption of the LA1835 can reduce the number of adjustment steps in the production line.

### Functions

- AM: RF amplifier, mixer, oscillator (with ALC), IF amplifier, detector, AGC, oscillator buffer, tuning indicator (narrow-band SD), IF buffer output, stereo IF output
- FM IF: IF amplifier, quadrature detector, band muting, tuning indicator, IF buffer output, S-meter
- MPX: PLL stereo decoder, stereo indicator, forced mono, VCO stop function, adjacent channel interference rejection function (114 kHz), post-amplifier with muting function

### Features

- Significant reduction in the number of manufacturing adjustment steps
  - FM detector: Adjustment free (using a ceramic discriminator)
  - MPX VCO: Adjustment free (using a ceramic resonator)
- Tuning indicator output provided. (This pin can also be used as a narrow band stop signal and as a muting drive output.)
- Adjustable FM stop sensitivity and bandwidth
- Built-in AM local oscillator buffer

- Support for AM low band cut control
- Adjustable AM stop sensitivity
