

Audio level sensor

BA335

The BA335 is a sensor amplifier which consists of three blocks : a small signal audio amplifier, a hysteresis comparator, and a driver. Housed in a 9-pin SIP package, it is optimal for tape recorder end detection and tape mute detection.

●Applications

Tape end detection
Tape mute detection

●Features

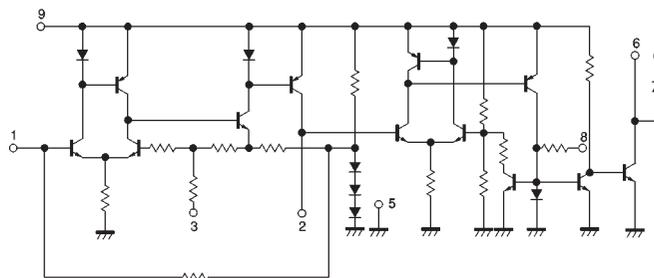

- 1) Built-in comparator with stable hysteresis under power supply voltage and temperature fluctuations.
- 2) Built-in transistor and diode capable of driving an inductive load at 600mA.
- 3) Time delays can be created as needed with an external CR circuit.

●Absolute maximum ratings (Ta = 25°C)

Parameter	Symbol	Limits	Unit
Power supply voltage	V _{CC}	15	V
Power dissipation	P _d	500*	mW
Operating temperature	T _{opr}	-20~+75	°C
Storage temperature	T _{stg}	-50~+125	°C
Maximum transistor collector current	I _{F Max.}	750	mA
Maximum diode forward current	I _{C Max.}	750	mA

* Reduced by 5.0mW for each increase in Ta of 1°C over 25°C.

●Internal circuit schematic

●Electrical characteristics (unless otherwise noted, Ta = 25°C and V_{CC} = 9.0V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions
Quiescent current	I _Q	—	6	13	mA	—
Output transistor leak current	I _{L1}	—	—	100	μA	—
Output diode leak current	I _{L2}	—	—	100	μA	—
Output transistor saturation voltage	V _{CE(sat)}	—	1.5	2.0	V	I _c =600mA
Output diode forward voltage	V _F	—	1.5	2.0	V	I _F =600mA
Input discrimination off level	V _{IN}	-54	-50	-43	dBm	f=1kHz
Comparator on level	V _{TH1}	3.0	3.5	4.0	V	—
Comparator off level	V _{TH2}	1.8	2.2	2.6	V	—
Pin 8 high level	V _{P8}	0.45	0.55	—	V	—

●Measurement circuit

●Attached components

C₁ : Input coupling capacitor. 1 to 2.2μF recommended.

C₂ : AC bypass capacitor. 0.1 to 0.47μF recommended.

R₁, C₃ : Resistor and capacitor for setting time delay.

R₂, C₄ : Resistor and capacitor for ripple filter.

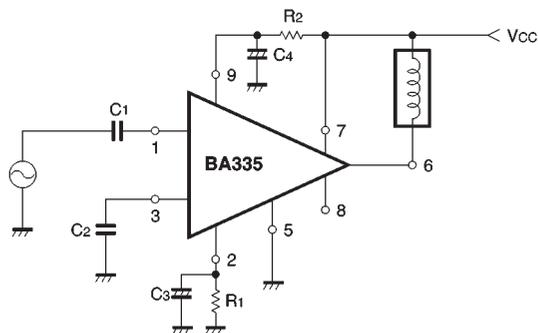

Fig. 3

●Input characteristics

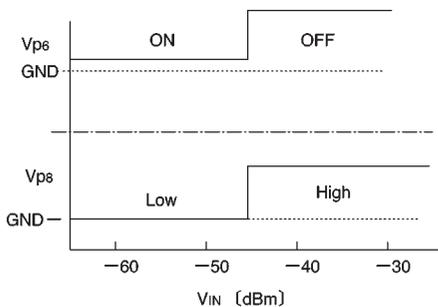

Fig. 4

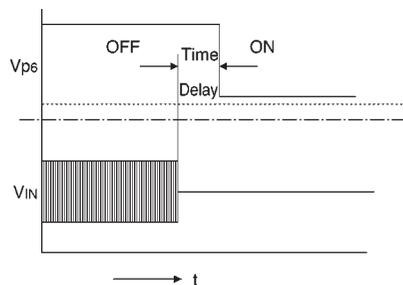

Fig. 5

As shown in Fig. 4, V_{P6} and V_{P8} invert when the input reaches approximately -45dBm. V_{P8} is designed to be able to directly drive the NPN small signal transistor at this time. When on, V_{P6} is capable of accepting a maximum of 600mA of current (this will vary as shown in the duty cycle table). A continuous ON should last for no more than 3 seconds.

Time delay using the hysteresis comparator is as follows. When an input signal of -45dBm or more goes to nothing ceases, the electrical potential of Pin 2 begins to fall due to the CR circuit connected to Pin 2. The time until the hysteresis comparator inverts is the time delay. When deciding the values of the capacitor and resistor, select a resistor value from 100 to 500kΩ.
