

Digital transistors (built in resistor)

DTA124TE / DTA124TUA / DTA124TKA / DTA124TSA

● Features

- 1) Built-in circuit enables the configuration of an inverter circuit without connecting external input resistors (see equivalent circuit).
- 2) The bias resistors consist of thin-film resistors with complete isolation to allow positive biasing of the input. They also have the advantage of almost completely eliminating parasitic effects.
- 3) Only the on/off conditions need to be set for operation, making device design easy.
