■ PRECAUTIONS ON USE

- Be sure to ground the pins of AV_{DD}, DV_{DD}, DV_{DDI}, V_{RT}, V_{RB}, V_{R1}, V_{R2}, and V_{R3} via high-frequency capacitor. Place the high-frequency capacitor as close as possible to the pin.
- To avoid generation of undesired current owing to indetermination of internal logic, set CĒ to "H" at powering on and input more than five clock pulses just after operation (CĒ: H → L).
