Address bits A_{11} to A_{20} = X = "H" or "L" for all address commands except for Program Address (PA) and Sector Address (SA).

Bus operations are defined in Table 2.

Both Read/Reset commands are functionally equivalent, resetting the device to the read mode.

RA =Address of the memory location to be read.

PA =Address of the memory location to be programmed. Addresses are latched on the falling edge of the write pulse.

SA =Address of the sector to be erased. The combination of A_{20}, A_{19}, A_{18}, A_{17}, A_{16}, A_{15}, A_{14}, and A_{13} will uniquely select any sector.

RD =Data read from location RA during read operation.

PD =Data to be programmed at location PA.

SPA =Sector address to be protected. Set sector address (SA) and (A_6, A_1, A_0) = (0, 1, 0).

SD =Sector protection verify data. Output 01H at protected sector addresses and output 00H at unprotected sector addresses.

Note: This command is valid while Fast Mode.

■ ABSOLUTE MAXIMUM RATINGS

Storage Temperature	–55°C to +125°C
Ambient Temperature with Power Applied	–25°C to +85°C
Voltage with Respect to Ground All pins (Note)	–0.3 V to $V_{CC}f$ +0.5 V
	–0.3 V to $V_{CC}s$ +0.5 V
$V_{CC}f$/$V_{CC}s$ Supply (Note)	–0.3 V to +4.6 V

Note: Minimum DC voltage on input or I/O pins are –0.5 V. During voltage transitions, inputs may negativeovershoot V_{SS} to –2.0 V for periods of up to 20 ns. Maximum DC voltage on output and I/O pins are $V_{CC}f$ +0.5 V or $V_{CC}s$ +0.5 V. During voltage transitions, outputs may positive overshoot to V_{CC} +2.0 V for periods of up to 20 ns.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

■ RECOMMENDED OPERATING RANGES

Commercial Devices

Ambient Temperature (T_A)	–20°C to +85°C
$V_{CC}f$/$V_{CC}s$ Supply Voltages	+2.7 V to +3.6 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

WARNING: Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

■ HANDRING OF PACKAGE

Please handle this package carefully since the sides of packages are right angle.

■ CAUTION

1.)The high voltage (VID) can not apply to address pins and control pins except $\overline{RESET}$. Therefore, it can not use autoselect and sector protect function by applying the high voltage (VID) to specific pins.

2.)For the sector protection, since the high voltage (VID) can be applied to the $\overline{RESET}$, it can be protected the sector useing "Extended sector protect" command.
