## F<sup>2</sup>MC-8L MB89150/150A Series

**MB89151/151A/152/152A/153/153A/154/154A/155/155A  
MB89P155/PV150**

### ■ DESCRIPTION

The MB89150/A series has been developed as general-purpose version of the F<sup>2</sup>MC\*-8L family consisting of proprietary 8-bit, single-chip microcontrollers.

In addition to a compact instruction set, the MB89150 series microcontrollers contain a variety of peripheral functions such as dual-clock control system, five operating speed control stages, timers, a serial interface, a remote control transmission output, external interrupts, an LCD controller/driver, an LCD booster, and a watch prescaler.

\*: F<sup>2</sup>MC stands for FUJITSU Flexible Microcontroller.

### ■ FEATURES

- F<sup>2</sup>MC-8L family CPU core
- Dual-clock system
- High-speed processing at low voltage
- Minimum execution time: 0.95  $\mu$ s/2.7 V, 1.33  $\mu$ s/2.2 V
- I/O ports: max. 43 channels
- 21-bit time-base timer
- 8/16-bit timer/counter: 1 channel (8 bits  $\times$  2 channels)
- 8-bit serial I/O: 1 channel
- LCD controller/driver: Max. 36 segments  $\times$  4 commons (built-in booster)
- Remote control transmission output

(Continued)

### ■ PACKAGE

# MB89150/150A Series

(Continued)

- Buzzer output
- Watch prescaler (15 bits)
- External interrupts (wake-up function)

Four independent channels with edge detection function plus eight level-interrupt channels

## ■ PRODUCT LINEUP

Part number Parameter	MB89151/A	MB89152/A	MB89153/A	MB89154/A	MB89155/A	MB89P155	MB89PV150
Classification	Mass production products (mask ROM products)					One-time PROM product	Piggyback/ evaluation product (for evaluation and development)
ROM size	4 K × 8 bits (internal mask ROM)	6 K × 8 bits (internal mask ROM)	8 K × 8 bits (internal mask ROM)	12 K × 8 bits (internal mask ROM)	16 K × 8 bits (internal mask ROM)	16 K × 8 bits (internal PROM, programming with general- purpose EPROM programmer)	32 K × 8 bits (external ROM)
RAM size	128 × 8 bits	256 × 8 bits				512 × 8 bits	
CPU functions	Number of instructions:		136				
	Instruction bit length:		8 bits				
	Instruction length:		1 to 3 bytes				
	Data bit length:		1, 8, 16 bits				
	Minimum execution time:		0.95 μs/4.2 MHz				
	Interrupt processing time:		8.57 μs/4.2 MHz				
Ports	I/O port (N-ch open-drain):		8 (6 ports also serve as peripherals, 3 ports are a high-current drive type.)				
	Output port (N-ch open-drain):		18 (16 ports also serve as segment pins, 2 ports serve as boost capacitor connection pins.) <sup>*1</sup>				
	I/O port (CMOS):		16 (12 ports also serve as an external interrupt.)				
	Output port (CMOS):		1 (Also serves as a remote control.)				
	Total:		43 (max.)				
Timer/counter	8-bit timer counter × 2 channel or 16-bit event counter × 1 channel						
8-bit serial I/O	8 bits LSB first/MSB first selectability						
LCD controller/ driver	Common output:		4				No reference voltage generator and booster for LCD driving
	Segment output:		32 (max.) <sup>*1</sup>				
	Bias power supply pins:		4				
	LCD display RAM size:		36 × 4 bits				
	Booster for LCD driving:		Built-in <sup>*1</sup>				
	Dividing resistor for LCD driving:		Built-in (an external resistor selectability)				
External interrupts (wake-up function)			4 (edge selectability) 8 (level interrupt only)				
Buzzer output	1 (7 frequencies are selectable by the software.)

## ■ DIFFERENCES AMONG PRODUCTS

### 1. Memory Size

Before evaluating using the piggyback product, verify its differences from the product that will actually be used. Take particular care on the following points:

- On the MB89151/A, addresses 0140<sub>H</sub> and later of the register bank cannot be used. On the MB89152/A, 153/A, 154/A, 155/A, and MB89P155, addresses 0180<sub>H</sub> and later of each register bank cannot be used.
- On the MB89P155, addresses BFF0<sub>H</sub> to BFF6<sub>H</sub> comprise the option setting area, option settings can be read by reading these addresses.
- The stack area, etc., is set at the upper limit of the RAM.

### 2. Current Consumption

- In the case of the MB89PV150, add the current consumed by the EPROM which is connected to the top socket.
- When operated at low speed, the product with an OTPROM (one-time PROM) or an EPROM will consume more current than the product with a mask ROM.

However, the current consumption in sleep/stop modes is the same. (For more information, see sections “■ Electrical Characteristics” and “■ Example Characteristics.”)

### 3. Mask Options

Functions that can be selected as options and how to designate these options vary by the product.

Before using options check section “■ Mask Options.”

Take particular care on the following point:

- On the MB89PV150, options are fixed, except for the segment output selection.

## ■ PIN DESCRIPTION

Pin no.		Pin name	Circuit type	Function
LQFP*1*3	MQFP*4 QFP*2			
16	18	X0	A	Main clock oscillator pins
15	17	X1		
18	20	MOD0	C	Operating mode selection pins Connect directly to V <sub>ss</sub> .
17	19	MOD1		
19	21	RST	D	Reset I/O pin This pin is an N-ch open-drain output type with a pull-up resistor and a hysteresis input type. "L" is output from this pin by an internal reset source. The internal circuit is initialized by the input of "L".
20 to 27	22 to 29	P00/INT20 to P07/INT27	E	General-purpose I/O ports Also serve as an external interrupt 2 input (wake-up function). External interrupt 2 input is hysteresis input.
28 to 31	30 to 33	P10/INT10 to P13/INT13	E	General-purpose I/O ports Also serve as external interrupt 1 input. External interrupt 1 input is hysteresis input.
32 to 35	34 to 37	P14 to P17	F	General-purpose I/O ports
36	38	P20/EC	H	N-ch open-drain general-purpose I/O port Also serves as the external clock input for the timer. The peripheral is a hysteresis input type.
37	39	P21	I	N-ch open-drain general-purpose I/O port
38	40	P22/TO	I	N-ch open-drain general-purpose I/O port Also serves as a timer output.
39	41	P23/SI	H	N-ch open-drain general-purpose I/O port Also serves as the data input for the 8-bit serial I/O. The peripheral is a hysteresis input type.
40	42	P24/SO	I	N-ch open-drain general-purpose I/O port Also serves as the data output for the 8-bit serial I/O.
41	43	P25/SCK	H	N-ch open-drain general-purpose I/O port Also serves as the clock I/O for the 8-bit serial I/O. The peripheral is a hysteresis input type.
42	44	P26	I	N-ch open-drain general-purpose I/O port
43	45	P27/BUZ	I	N-ch open-drain general-purpose I/O port Also serves as a buzzer output.

## ■ HANDLING DEVICES

### 1. Preventing Latchup

Latchup may occur on CMOS ICs if voltage higher than  $V_{CC}$  or lower than  $V_{SS}$  is applied to input and output pins other than medium- to high-voltage pins or if higher than the voltage which shows on “1. Absolute Maximum Ratings” in section “■ Electrical Characteristics” is applied between  $V_{CC}$  and  $V_{SS}$ .

When latchup occurs, power supply current increases rapidly and might thermally damage elements. When using, take great care not to exceed the absolute maximum ratings.

Also, take care to prevent the analog power supply ( $AV_{CC}$  and  $AVR$ ) and analog input from exceeding the digital power supply ( $V_{CC}$ ) when the analog system power supply is turned on and off.

### 2. Treatment of Unused Input Pins

Leaving unused input pins open could cause malfunctions. They should be connected to a pull-up or pull-down resistor.

### 3. Treatment of Power Supply Pins on Microcontrollers with A/D and D/A Converters

Connect to be  $AV_{CC} = DAVC = V_{CC}$  and  $AV_{SS} = AVR = V_{SS}$  even if the A/D and D/A converters are not in use.

### 4. Treatment of N.C. Pins

Be sure to leave (internally connected) N.C. pins open.

### 5. Power Supply Voltage Fluctuations

Although  $V_{CC}$  power supply voltage is assured to operate within the rated range, a rapid fluctuation of the voltage could cause malfunctions, even if it occurs within the rated range. Stabilizing voltage supplied to the IC is therefore important. As stabilization guidelines, it is recommended to control power so that  $V_{CC}$  ripple fluctuations (P-P value) will be less than 10% of the standard  $V_{CC}$  value at the commercial frequency (50 to 60 Hz) and the transient fluctuation rate will be less than 0.1 V/ms at the time of a momentary fluctuation such as when power is switched.

### 6. Precautions when Using an External Clock

Even when an external clock is used, oscillation stabilization time is required for power-on reset (optional) and wake-up from stop mode.

# MB89150/150A Series

## ■ PROGRAMMING TO THE EPROM ON THE MB89P155

The MB89P155 is an OTPROM version of the MB89150/A series.

### 1. Features

- 16-Kbyte PROM on chip
- Options can be set using the EPROM programmer.
- Equivalency to the MBM27C256A in EPROM mode (when programmed with the EPROM programmer)

### 2. Memory Space

Memory space in the EPROM mode is diagrammed below.

# MB89150/150A Series

## 3. Programming to the EPROM

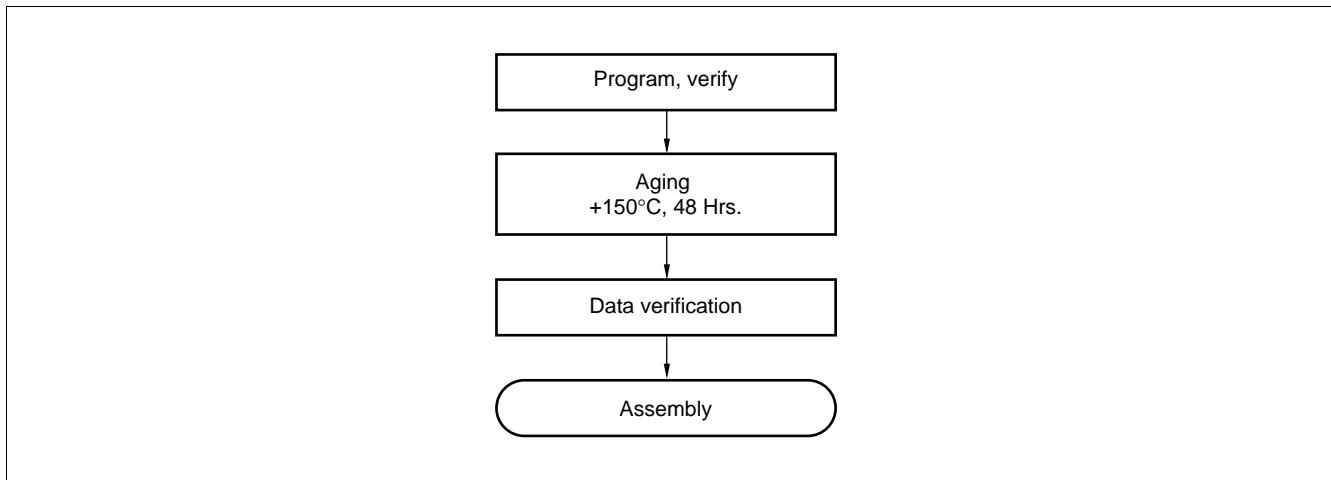

In EPROM mode, the MB89P155 functions equivalent to the MBM27C256A. This allows the PROM to be programmed with a general-purpose EPROM programmer (the electronic signature mode cannot be used) by using the dedicated socket adapter.

### • Programming procedure

- (1) Set the EPROM programmer to the MBM27C256A.
- (2) Load program data into the EPROM programmer at 4000<sub>H</sub> to 7FFF<sub>H</sub> (note that addresses C000<sub>H</sub> to FFFF<sub>H</sub> while operating as a normal operating mode assign to 4000<sub>H</sub> to 7FFF<sub>H</sub> in EPROM mode).  
Load option data into addresses 3FF0<sub>H</sub> to 3FF5<sub>H</sub> of the EPROM programmer. (For information about each corresponding option, see "7. Setting OTPROM Options.")
- (3) Program with the EPROM programmer.

## 4. Recommended Screening Conditions

High-temperature aging is recommended as the pre-assembly screening procedure for a product with a blanked OTPROM microcomputer program.

## 5. Programming Yield

All bits cannot be programmed at Fujitsu shipping test to a blanked OTPROM microcomputer, due to its nature. For this reason, a programming yield of 100% cannot be assured at all times.

## 6. EPROM Programmer Socket Adapter

Package	Compatible socket adapter
FPT-80P-M05	ROM-80SQF-28DP-8L
FPT-80P-M06	ROM-80QF-28DP-8L3
FPT-80P-M11	ROM-80QF2-28DP-8L2

Inquiry: Sun Hayato Co., Ltd.: TEL 81-3-3802-5760

# MB89150/150A Series

## 7. Setting OTPROM Options

The programming procedure is the same as that for the PROM. Options can be set by programming values at the addresses shown on the memory map. The relationship between bits and options is shown on the following bit map:

### • OTPROM option bit map

	Bit 7	Bit 6	Bit 5	Bit 4	Bit 3	Bit 2	Bit 1	Bit 0

## ■ CPU CORE

### 1. Memory Space

The microcontrollers of the MB89150/A series offer a memory space of 64 Kbytes for storing all of I/O, data, and program areas. The I/O area is located at the lowest address. The data area is provided immediately above the I/O area. The data area can be divided into register, stack, and direct areas according to the application. The program area is located at exactly the opposite end, that is, near the highest address. Provide the tables of interrupt reset vectors and vector call instructions toward the highest address within the program area. The memory space of the MB89150/A series is structured as illustrated below.

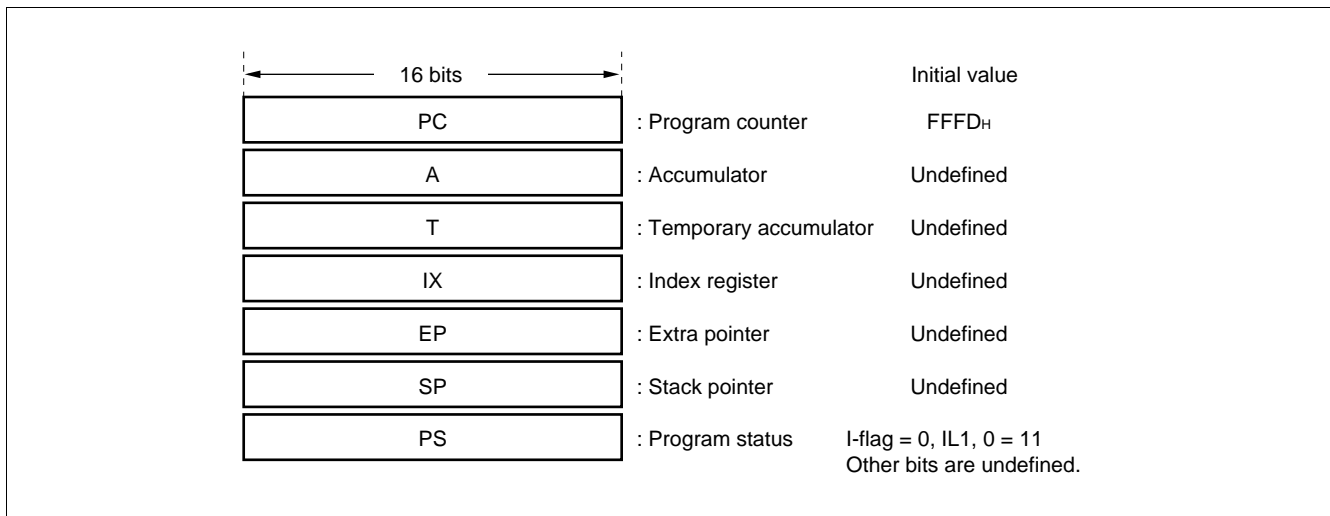

# MB89150/150A Series

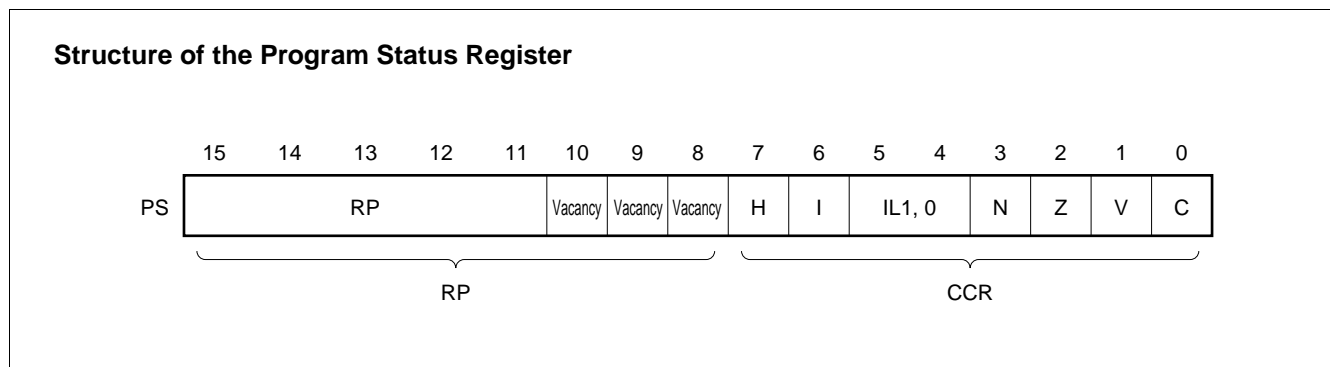

## 2. Registers

The F<sup>2</sup>MC-8L family has two types of registers; dedicated registers in the CPU and general-purpose registers in the memory. The following dedicated registers are provided:

Program counter (PC):	A 16-bit register for indicating instruction storage positions
Accumulator (A):	A 16-bit temporary register for storing arithmetic operations, etc. When the instruction is an 8-bit data processing instruction, the lower byte is used.
Temporary accumulator (T):	A 16-bit register which performs arithmetic operations with the accumulator When the instruction is an 8-bit data processing instruction, the lower byte is used.
Index register (IX):	A 16-bit register for index modification
Extra pointer (EP):	A 16-bit pointer for indicating a memory address
Stack pointer (SP):	A 16-bit register for indicating a stack area
Program status (PS):	A 16-bit register for storing a register pointer, a condition code

The PS can further be divided into higher 8 bits for use as a register bank pointer (RP) and the lower 8 bits for use as a condition code register (CCR). (See the diagram below.)

# MB89150/150A Series

The RP indicates the address of the register bank currently in use. The relationship between the pointer contents and the actual address is based on the conversion rule illustrated below.

## Rule for Conversion of Actual Addresses of the General-purpose Register Area

The CCR consists of bits indicating the results of arithmetic operations and the contents of transfer data and bits for control of CPU operations at the time of an interrupt.

**H-flag:** Set when a carry or a borrow from bit 3 to bit 4 occurs as a result of an arithmetic operation. Cleared otherwise. This flag is for decimal adjustment instructions.

**I-flag:** Interrupt is allowed when this flag is set to 1. Interrupt is prohibited when the flag is set to 0. Set to 0 when reset.

**IL1, 0:** Indicates the level of the interrupt currently allowed. Processes an interrupt only if its request level is higher than the value indicated by this bit.

IL1	ILO	Interrupt level	High-low
0	0	1	High ↑ ↓ Low = no interrupt
0	1		
1	0	2	
1	1	3	

**N-flag:** Set if the MSB is set to 1 as the result of an arithmetic operation. Cleared when the bit is set to 0.

**Z-flag:** Set when an arithmetic operation results in 0. Cleared otherwise.

**V-flag:** Set if the complement on 2 overflows as a result of an arithmetic operation. Reset if the overflow does not occur.

**C-flag:** Set when a carry or a borrow from bit 7 occurs as a result of an arithmetic operation. Cleared otherwise. Set to the shift-out value in the case of a shift instruction.

# MB89150/150A Series

The following general-purpose registers are provided:

General-purpose registers: An 8-bit register for storing data

The general-purpose registers are 8 bits and located in the register banks of the memory. One bank contains eight registers. Up to a total of 8 banks can be used on the MB89151 (RAM  $128 \times 8$  bits), and a total of 16 banks can be used on the MB89152/3/4/5 (RAM  $256 \times 8$  bits). The bank currently in use is indicated by the register bank pointer (RP).

Note: The number of register banks that can be used varies with the RAM size.

## ■ ELECTRICAL CHARACTERISTICS

### 1. Absolute Maximum Ratings

( $V_{SS} = 0.0\text{ V}$ )

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	$V_{CC}$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	
LCD power supply voltage	V0 to V3	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	V0 to V3 pins on the product with booster
		$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	V0 to V3 pins on the product without booster
Input voltage	$V_{I1}$	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	$V_{I1}$ must not exceed $V_{SS} + 7.0\text{ V}$ . All pins except P20 to P27 without a pull-up resistor
	$V_{I2}$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	P20 to P27 without a pull-up resistor
Output voltage	$V_{O1}$	$V_{SS} - 0.3$	$V_{CC} + 0.3$	V	$V_{O1}$ must not exceed $V_{SS} + 7.0\text{ V}$ . All pins except P20 to P27, P31, P32, P40 to P47, P50 to P57 without a pull-up resistor
	$V_{O2}$	$V_{SS} - 0.3$	$V_{SS} + 7.0$	V	P20 to P27, P31, P32, P40 to P47, and P50 to P57, without a pull-up resistor
“L” level maximum output current	$I_{OL1}$	—	10	mA	All pins except P21, P26, P27, and power supply pins
	$I_{OL2}$	—	20	mA	P21, P26, and P27
“L” level average output current	$I_{OLAV1}$	—	4	mA	Average value (operating current $\times$ operating rate) All pins except P21, P26, P27, and power supply pins.
	$I_{OLAV2}$	—	8	mA	Average value (operating current $\times$ operating rate) P21, P26, and P27
“L” level total maximum output current	$\Sigma I_{OL}$	—	80	mA	
“L” level total average output current	$\Sigma I_{OLAV}$	—	40	mA	Average value (operating current $\times$ operating rate)
“H” level maximum output current	$I_{OH1}$	—	-5	mA	All pins except P30 and power supply pins
	$I_{OH2}$	—	-10	mA	P30

(Continued)

# MB89150/150A Series

(Continued)

(V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
“H” level average output current	I <sub>OHAV1</sub>	—	−2	mA	Average value (operating current × operating rate) All pins except P30 and power supply pins.
	I <sub>OHAV2</sub>	—	−4	mA	Average value (operating current × operating rate) P30
“H” level total output current	∑I <sub>OH</sub>	—	−20	mA	
“H” level total average output current	∑I <sub>OHAV</sub>	—	−10	mA	Average value (operating current × operating rate)
Power consumption	P <sub>D</sub>	—	300	mW	
Operating temperature	T <sub>A</sub>	−40	+85	°C	
Storage temperature	T <sub>stg</sub>	−55	+150	°C	

Precautions: Permanent device damage may occur if the above “Absolute Maximum Ratings” are exceeded. Functional operation should be restricted to the conditions as detailed in the operational sections of this data sheet. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## 2. Recommended Operating Conditions

(V<sub>SS</sub> = 0.0 V)

Parameter	Symbol	Value		Unit	Remarks
		Min.	Max.		
Power supply voltage	V <sub>CC</sub>	2.2*1	6.0	V	Normal operation assurance range Single clock system of the mask ROM product.
		2.2*1	4.0	V	Normal operation assurance range Dual-clock system of the mask ROM product.
		2.7*1	6.0	V	MB89P155/PV150
		1.5	6.0	V	Retains the RAM state in stop mode
LCD power supply voltage	V <sub>0</sub> to V <sub>3</sub>	V <sub>SS</sub>	V <sub>CC</sub> *2	V	V <sub>0</sub> to V <sub>3</sub> pins
LCD reference power supply input voltage	V <sub>IR</sub>	1.3	2.2	V	V <sub>1</sub> pin on the products with a booster Reference power external input
Operating temperature	T <sub>A</sub>	−40	+85	°C	

\*1: The minimum operating power supply voltage varies with the execution time (instruction cycle time) setting for the operating frequency.

\*2: The LCD power supply voltage range and optimum value vary depending on the characteristics of the liquid-crystal display element.

# MB89150/150A Series

**Figure 1 Operating Voltage vs. Main Clock Operating Frequency (MB89P155/PV150, and single-clock MB89151/A, 152/A, 153/A, 154/A, and MB89155/A)**

**Figure 2 Operating Voltage vs. Main Clock Operating Frequency (Dual-clock MB89151/A, 152/A, 153/A, 154/A, and MB89155/A)**

Figures 1 and 2 indicate the operating frequency of the external oscillator at a minimum execution time of  $4/F_{CH}$ .

Since the operating voltage range is dependent on the minimum execution time, see the minimum execution time if the operating speed is switched using a gear.

## MB89150/150A Series

## 3. DC Characteristics

 $(V_{CC} = +5.0\text{ V}, V_{SS} = 0.0\text{ V}, T_A = -40^\circ\text{C to } +85^\circ\text{C})$ 

Parameter	Symbol	Pin	Condition	Value			Unit	Remarks
				Min.	Typ.	Max.		
“H” level input voltage	$V_{IH}$	P00 to P07, P10 to P17, P20 to P27	—	$0.7 V_{CC}$	—	$V_{CC} + 0.3$	V	CMOS input
	$V_{IHS}$	RST, MOD0, MOD1, EC, SI, SCK, INT10 to INT13, INT20 to INT27		$0.8 V_{CC}$	—	$V_{SS} + 0.3$	V	Hysteresis input
“L” level input voltage	$V_{IL}$	P00 to P07, P10 to P17, P20 to P27	—	$V_{SS} - 0.3$	—	$0.3 V_{CC}$	V	CMOS input
	$V_{ILS}$	RST, MOD0, MOD1, EC, SI, SCK, INT10 to INT13, INT20 to INT27		$V_{SS} - 0.3$	—	$0.2 V_{CC}$	V	Hysteresis input
Open-drain output pin application voltage	$V_D$	P20 to P27, P31, P32, P40 to P47, P50 to P57	—	$V_{SS} - 0.3$	—	$V_{SS} + 6.0^{*1}$	V	Without pull-up resistor
“H” level output voltage	$V_{OH1}$	P00 to P07, P10 to P17	$I_{OH} = -2.0\text{ mA}$	2.4	—	—	V	
	$V_{OH2}$	P30	$I_{OH} = -6.0\text{ mA}$	4.0	—	—	V	
“L” level output voltage	$V_{OL1}$	P00 to P07, P10 to P17, P20, P22 to P25, P30 to P32, P40 to P47, P50 to P57	$I_{OL} = 1.8\text{ mA}$	—	—	0.4	V	
	$V_{OL2}$	P21, P26, P27	$I_{OL} = 8.0\text{ mA}$	—	—	0.4	V	
	$V_{OL3}$	RST	$I_{OL} = 4.0\text{ mA}$	—	—	0.4	V	
Input leakage current (Hi-z output leakage current)	$I_{LI1}$	MOD0, MOD1, P30, P00 to P07, P10 to P17	$0.0\text{ V} < V_i < V_{CC}$	—	—	$\pm 5$	$\mu\text{A}$	Without pull-up resistor
	$I_{LI2}$	P20 to P27, P31, P32, P40 to P47, P50 to P57	$0.0\text{ V} < V_i < 6.0\text{ V}$	—	—	$\pm 1$	$\mu\text{A}$	Without pull-up resistor
Pull-up resistance	$R_{PULL}$	P00 to P07, P10 to P17, P20 to P27, P40 to P47, P50 to P57, RST	$V_i = 0.0\text{ V}$	25	50	100	$\text{k}\Omega$	With pull-up resistor
Common output impedance	$R_{VCOM}$	COM0 to COM3	$V_1 \text{ to } V_3 = 5.0\text{ V}$	—	—	2.5	$\text{k}\Omega$	
Segment output impedance	$R_{VSEG}$	SEG0 to SEG35	$V_1 \text{ to } V_3 = 5.0\text{ V}$	—	—	15	$\text{k}\Omega$	
LCD divided resistance	$R_{LCD}$	—	Between $V_{CC}$ and $V_0$	300	500	750	$\text{k}\Omega$	Products without a booster only
LCD leakage current	$I_{LCDL}$	$V_0 \text{ to } V_3$ , COM0 to COM3, SEG0 to SEG35	—	—	—	$\pm 1$	$\mu\text{A}$

## ■ INSTRUCTIONS

Execution instructions can be divided into the following four groups:

- Transfer
- Arithmetic operation
- Branch
- Others

Table 1 lists symbols used for notation of instructions.

**Table 1 Instruction Symbols**

Symbol	Meaning
dir	Direct address (8 bits)
off	Offset (8 bits)
ext	Extended address (16 bits)
#vct	Vector table number (3 bits)
#d8	Immediate data (8 bits)
#d16	Immediate data (16 bits)
dir: b	Bit direct address (8:3 bits)
rel	Branch relative address (8 bits)
@	Register indirect (Example: @A, @IX, @EP)
A	Accumulator A (Whether its length is 8 or 16 bits is determined by the instruction in use.)
AH	Upper 8 bits of accumulator A (8 bits)
AL	Lower 8 bits of accumulator A (8 bits)
T	Temporary accumulator T (Whether its length is 8 or 16 bits is determined by the instruction in use.)
TH	Upper 8 bits of temporary accumulator T (8 bits)
TL	Lower 8 bits of temporary accumulator T (8 bits)
IX	Index register IX (16 bits)

*(Continued)*

# MB89150/150A Series

(Continued)

Symbol	Meaning
EP	Extra pointer EP (16 bits)
PC	Program counter PC (16 bits)
SP	Stack pointer SP (16 bits)
PS	Program status PS (16 bits)
dr	Accumulator A or index register IX (16 bits)
CCR	Condition code register CCR (8 bits)
RP	Register bank pointer RP (5 bits)
Ri	General-purpose register Ri (8 bits, i = 0 to 7)
×	Indicates that the very × is the immediate data. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
(×)	Indicates that the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)
((×))	The address indicated by the contents of × is the target of accessing. (Whether its length is 8 or 16 bits is determined by the instruction in use.)

Columns indicate the following:

Mnemonic: Assembler notation of an instruction

~: Number of instructions

#: Number of bytes

Operation: Operation of an instruction

TL, TH, AH: A content change when each of the TL, TH, and AH instructions is executed. Symbols in the column indicate the following:

- “-” indicates no change.
- dH is the 8 upper bits of operation description data.
- AL and AH must become the contents of AL and AH immediately before the instruction is executed.
- 00 becomes 00.

N, Z, V, C: An instruction of which the corresponding flag will change. If + is written in this column, the relevant instruction will change its corresponding flag.

OP code: Code of an instruction. If an instruction is more than one code, it is written according to the following rule:

Example: 48 to 4F ← This indicates 48, 49, ... 4F.

## PACKAGE DIMENSIONS

80-pin Plastic QFP  
(FPT-80P-M06)

© 1994 FUJITSU LIMITED F80010S-3C-2

Dimensions in mm (inches)

80-pin Plastic LQFP  
(FPT-80P-M11)

© 1995 FUJITSU LIMITED F80016S-1C-3

Dimensions in mm (inches)

# MB89150/150A Series

## 80-pin Plastic LQFP (FPT-80P-M05)

© 1995 FUJITSU LIMITED F80008S-2C-5

Dimensions in mm (inches)

## 80-pin Ceramic MQFP (MQP-80C-P01)

© 1994 FUJITSU LIMITED M80001SC-4-2

Dimensions in mm (inches)

# MB89150/150A Series

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

#### **CAUTION:**

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
