## FLASH MEMORY CARD PCMCIA Rel.2/JEIDA Ver.4 conformable

### MB98A808Ax-/809Ax-/810Ax-/811Ax-20

#### FLASH ERASABLE AND PROGRAMMABLE MEMORY CARD 256 K/512 K/1 M/2 M-BYTE

#### ■ DESCRIPTION

The Fujitsu MB98A808Ax, MB98A809Ax, MB98A810Ax and MB98A811Ax are Flash electrically erasable and programmable (Flash) memory cards capable of storing and retrieving large amounts of data. The memory circuits are housed in a credit-card sized 68-pin package. Internal circuit is protected by two metal panels, one at the top and bottom of the card, that help to reduce chip damage from electrostatic discharge.

A unique feature of the Fujitsu memory cards allows the user to organize the card into either an 8-bit or a 16-bit bus configuration. All cards are portable and operate on low power at high speed.

In accordance with the Personal Computer Memory Card International Association (PCMCIA) and Japan Electrical Industry Development Association (JEIDA) industry standard specification, Flash memory cards offer additional EEPROM memory that is used to store attribute data. The attribute memory is a Flash memory card option. (See page 2 for description of the three available options.)

- Credit card size: 85.6 mm (length) × 54.0 mm (width) × 3.3 mm (thick)
- PCMCIA/JEIDA conformed two-piece 68-pin connector (with a two-row built-in receptacle)
- Single +5.0 V ±5% power supply (+12.0 V ±5%V<sub>PP</sub>)
- Command control for Write/Erase operation
- Write protect function

#### ■ PACKAGE

CRD-68P-M17

# MB98A808Ax-/809Ax-/810Ax-/811Ax-20

## ■ ATTRIBUTE MEMORY OPTIONS

PCMCIA and JEIDA standard memory cards from Fujitsu provide a separate EEPROM memory address space for recording fundamental card information. It is used by the card manufacturers to record basic configuration information such as device type, size, speed, etc.

The attribute memory is selected by asserting the  $\overline{\text{REG}}$  pin on the card interface. Option descriptions as follows:

### OPTION 1: Attribute memory is not supported.

**REG Pin: Not Contacted**

(JEIDA Ver.3 conformable)

Part Number	Main Memory		Attribute Memory		Memory Organization *
	Memory Device	Access Time	Memory Device	Access Time	
MB98A808A1	1 M Flash Memory × 2 pcs	200 ns	—	—	256 K × 8 bits/128 K × 16 bits
MB98A809A1	1 M Flash Memory × 4 pcs	200 ns	—	—	512 M × 8 bits/256 K × 16 bits
MB98A810A1	1 M Flash Memory × 8 pcs	200 ns	—	—	1 M × 8 bits/512 M × 16 bits
MB98A811A1	1 M Flash Memory × 16 pcs	200 ns	—	—	2 M × 8 bits/1 M × 16 bits

### OPTION 2: Attribute memory in a separate location is not supported.

When  $\overline{\text{REG}}$  line is asserted, “FF” is output to the data bus to indicate that attribute data may be stored in main memory.

(PCMCIA Rel.2/JEIDA Ver.4 conformable)

Part Number	Main Memory		Attribute Memory		Memory Organization *
	Memory Device	Access Time	Memory Device	Access Time	
MB98A808A2	1 M Flash Memory × 2 pcs	200 ns	—	—	256 K × 8 bits/128 K × 16 bits
MB98A809A2	1 M Flash Memory × 4 pcs	200 ns	—	—	512 K × 8 bits/256 K × 16 bits
MB98A810A2	1 M Flash Memory × 8 pcs	200 ns	—	—	1 M × 8 bits/512 K × 16 bits
MB98A811A2	1 M Flash Memory × 16 pcs	200 ns	—	—	2 M × 8 bits/1 M × 16 bits

### OPTION 3: Attribute memory is supported. The data is stored in 16 K-bit EEPROM.

When the  $\overline{\text{REG}}$  line is asserted, data stored in EEPROM is output to the data bus.

(PCMCIA Rel.2/JEIDA Ver.4 conformable)

Part Number	Main Memory		Attribute Memory		Memory Organization *
	Memory Device	Access Time	Memory Device	Access Time	
MB98A808A3	1 M Flash Memory × 2 pcs	200 ns	EEPROM × 1 pcs	300 ns	256 K × 8 bits/128 K × 16 bits
MB98A809A3	1 M Flash Memory × 4 pcs	200 ns	EEPROM × 1 pcs	300 ns	512 K × 8 bits/256 K × 16 bits
MB98A810A3	1 M Flash Memory × 8 pcs	200 ns	EEPROM × 1 pcs	300 ns	1 M × 8 bits/512 K × 16 bits
MB98A811A3	1 M Flash Memory × 16 pcs	200 ns	EEPROM × 1 pcs	300 ns	2 M × 8 bits/1 M × 16 bits

**Note:** \* To be configured by user.

## ■ PIN DESCRIPTIONS

Symbol	Pin Name	Input/Output	Function
A <sub>0</sub> to A <sub>20</sub>	Address Input	Input	Address Inputs, A <sub>0</sub> to A <sub>20</sub> .
D <sub>0</sub> to D <sub>15</sub>	Data Input/Output	Input/Output	Data Inputs/Outputs. This data bus size (8-bit or 16-bit) is selected with $\overline{CE}_1$ and $\overline{CE}_2$ .
$\overline{CE}_1$	Card Enable for Lower Byte	Input	Active Low. - Lower byte (D <sub>0</sub> to D <sub>7</sub> ) is selected for read/write/erase function of flash memory cards.
$\overline{CE}_2$	Card Enable for Upper Byte	Input	Active Low. - Upper byte (D <sub>8</sub> to D <sub>15</sub> ) is selected for read/write / erase function of flash memory cards.
$\overline{REG}$	Attribute Memory Select	Input	Active Low. - Attribute memory is selected for read/write function of identification data of flash memory cards. (N.C. or "FF" data or attribute data.)
$\overline{OE}$	Output Enable	Input	Active Low. - Output enable for flash memory cards.
$\overline{WE}$	Write Enable	Input	Active Low. - Write enable for flash memory cards.
V <sub>PP1</sub>	Programming Voltage 1	Input	Programming voltage for lower byte.
V <sub>PP2</sub>	Programming Voltage 2	Input	Programming voltage for upper byte.
$\overline{CD}_1, \overline{CD}_2$	Card Detect	Output	These pins detect if the card has been correctly inserted. Both pins are tied to GND internally.
WP	Write Protect	Output	Write controller for flash memory cards. This pin outputs the Protect/Non Protect status of "WP Switch".
BVD1, BVD2	Battery Voltage Detect	Output	Both pins are tied to V <sub>CC</sub> internally.
V <sub>CC</sub>	Power Supply	—	Power Supply Voltage. (+5.0 V ±5%)
GND	Ground	—	System Ground.
N.C.	Non Connection	—

## ■ COMMAND DEFINITION TABLE

### Command Table for 8-bit Mode

Command	Bus Cycle Required	First Bus Cycle			Second Bus Cycle		
		Operation *1	Address *2	Data *3	Operation *1	Address *2	Data *3
Read Memory	1	Write	RA	00H	—	—	—
Read Intelligent ID Codes *4	3	Write	IA	90H	Read	IA	ID
Set Up Erase/Erase *5	2	Write	ZA	20H	Write	ZA	20H
Erase Verify *5	2	Write	EA	A0H	Read	EA	EVD
Set Up Write/Write *6	2	Write	WA	40H	Write	WA	WD
Write Verify *6	2	Write	WA	C0H	Read	WA	WVD
Reset *7 *8	2	Write	ZA	FFH	Write	ZA	FFH

### Command Table for 16-bit Mode

Command	Bus Cycle Required	First Bus Cycle			Second Bus Cycle		
		Operation *1	Address *2	Data *3	Operation *1	Address *2	Data *3
Read Memory	1	Write	RA	0000H	—	—	—
Read Intelligent ID Codes *4	3	Write	IA	9090H	Read	IA	ID
Set Up Erase/Erase *5	2	Write	ZA	2020H	Write	ZA	2020H
Erase Verify *5	2	Write	EA	A0A0H	Read	EA	EVD
Set Up Write/Write *6	2	Write	WA	4040H	Write	WA	WD
Write Verify *6	2	Write	WA	C0C0H	Read	WA	WVD
Reset *7 *8	2	Write	ZA	FFFFH	Write	ZA	FFFFH

**Notes:** \*1. Bus operations are defined in "FUNCTIONAL TRUTH TABLE".

\*2. IA = Identifier address: 00H for manufacturer code, 01H for device code.

EA = Address of memory location to be read during erase verify.

RA = Read Address

WA = Address of memory location to be written.

ZA = Address of 128 K-Byte zones involved in erase operation.

Addresses are latched on the falling edge of the Write Enable pulse.

\*3. ID = Data read from location IA during device identification.

Manufacturer = 31H for 8-bit, 3131H for 16-bit/Device = B4H for 8-bit, B4B4H for 16-bit

EVD = Data read from location EA during erase verify.

WD = Data to be programmed at location WA. Data is latched on the rising edge of Write Enable.

WVD = Data read from location WA during write verify. WA is latched on the Write command.

\*4. Following the Read Intelligent ID command, two read operations access manufacturer and device codes.

\*5. "ERASE FLOWCHART" in Fig.6, Fig.7 and Fig.8 illustrate the Erase Algorithm.

\*6. "WRITE FLOWCHART" in Fig.4 and Fig.5 illustrate the Write Algorithm.

\*7. The second bus cycle must be followed by the desired command register write.

\*8. The Reset command operates on a zone basis. To reset the entire card requires reset write cycles to each zone.

## ■ ABSOLUTE MAXIMUM RATINGS (See WARNING)

Parameter	Note	Symbol	Value	Unit
Supply Voltage		$V_{CC}$	-0.5 to +6.0	V
Input Voltage		$V_{IN}$	-0.5 to $V_{CC} + 0.5$	V
Output Voltage		$V_{OUT}$	-0.5 to $V_{CC} + 0.5$	V
Programming Voltage	*1	$V_{PP1}, V_{PP2}$	-2.0 to +14.0	V
Storage Temperature at Turning On the Power		$T_{BIAS}$	-10 to 70	°C
Ambient Temperature		$T_A$	0 to +60	°C
Storage Temperature		$T_{STG}$	-30 to +70	°C

**Note:** \*1. Minimum DC input voltage is -0.5 V.

**WARNING:** Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## ■ RECOMMENDED OPERATING CONDITIONS

Parameter	Symbol	Min.	Typ.	Max.	Unit
$V_{CC}$ Supply Voltage	$V_{CC}$	4.75	5.0	5.25	V
Ground	GND	—	0	—	V
Ambient Temperature	$T_A$	0	—	+55	°C

**WARNING:** Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

## ATTRIBUTE MEMORY WRITE CYCLE TIMING DIAGRAM ( $\overline{CE} = \text{CONTROLLED}$ , $\overline{REG} = V_{IL}$ ) \*1

**Notes:** \*1. This timing diagram is for MB98A808A3, 809A3, 810A3 and 811A3. "FF" data is available on MB98A808A2, 809A2, 810A2, and 811A2 only.

\*2. Data polling operation.

## ■ UNIQUE FEATURES FOR FLASH MEMORY CARD

### 1. SPECIAL MONITORING PINS

#### 1.1 $\overline{CD}_1$ , $\overline{CD}_2$ : Card Detection Pins

These pins detect the insertion of the card into the system. (See Fig. 9.)  
When the memory card has been correctly inserted,  $\overline{CD}_1$  and  $\overline{CD}_2$  are detected by the system.  $\overline{CD}_1$ ,  $\overline{CD}_2$  are tied to ground on the card side as shown in Fig. 9.

– Fig. 9 –

#### 1.2 WP: Write Protect Pins

This pin monitors the position of the Write Protect switch. As shown in Fig. 10, the Flash memory card has a Write Protect switch at the top of the card.

To write to the card, the switch must be turned to the “Non Protect” position and the  $\overline{WE}$  pin low. L-level is output on the WP pin.

To prevent writing to the card, the switch must be turned to the “Protect” position. H-level is output on the WP pin.

– Fig. 10 –

WP Switch	WP (output)
Protect	H
Non Protect	L

## ■ DEVICE HANDLING PRECAUTIONS

This device is composed of fine electronic parts, so take care in handling or keeping it as below.

- The card is made fine, so do not keep it in the high temperature nor high humidity, place like in the direct sunshine nor near the heater.
- The card should not be bent, scratched, dropped nor be shocked violently.
- This device should never be taken apart. It could destroy the card or your personal computer hardware.
- To help you handle this device safely, request us the device specifications when purchasing this device.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

#### **CAUTION:**

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
