# High speed thermal printhead (300 dots / inch) NM3004-UA10A

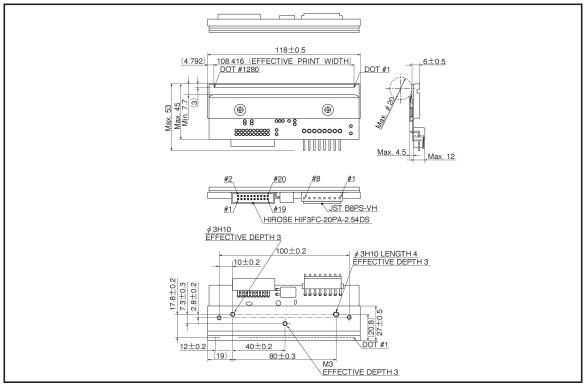

The NM3004-UA10A is a flat thin-film thermal printhead with a built in heat history control function, suited for general purpose compact printers as well as label printers with printing speeds up to 6 inch / second.

Applications

High definition bar code label printers High definition ticket printers General purpose compact printers

- Features
- High definition bar code label printers 1) High resolution of 300 dots / inch.
  - 2) Special glazed components for high speed, high quality printing.
  - Our heat history control circuit reduces the load on the printer to control heat history.
  - 4) Using a hard conductive film as a protective film on the heating element offers excellent resistance to electrostatic damage.

## **Printheads**

#### Level map

|         | Print Pattern | On Time | SLT=0.6ms |
|---------|---------------|---------|-----------|
| Level 1 |               | Ton a   | 0.5 ms    |
| Level 2 |               | Ton b   | 0.5 ms    |
| Level 3 |               | Ton c   | 0.38 ms   |
| Level 4 |               | Ton d   | 0.3 ms    |
| Level 5 |               | Ton e   | 0.3 ms    |
| Level 6 |               | Ton f   | 0.25 ms   |

E: Heated dot.

: Non-heated dot.

•: Dot to be printed.

This table shows a simple example. In actuality, the history of the previous level and the level before of the adjacent dots are included.

#### Pin assignments

| HIROSE |         |     |         |  |  |
|--------|---------|-----|---------|--|--|
| No.    | Circuit | No. | Circuit |  |  |
| 1      | GND     | 11  | CLK     |  |  |
| 2      | N.C.    | 12  | DI      |  |  |
| 3      | N.C.    | 13  | START   |  |  |
| 4      | N.C.    | 14  | LOAD    |  |  |
| 5      | Vdd     | 15  | RESET   |  |  |
| 6      | Vdd     | 16  | DO      |  |  |
| 7      | INC     | 17  | STB2    |  |  |
| 8      | SET     | 18  | STB1    |  |  |
| 9      | E-OUT   | 19  | ТМ      |  |  |
| 10     | OR-ON   | 20  | ТМ      |  |  |

| JST |         |
|-----|---------|
| No. | Circuit |
| 1   | VH      |
| 2   | VH      |
| 3   | VH      |
| 4   | VH      |
| 5   | GND     |
| 6   | GND     |
| 7   | GND     |
| 8   | GND     |
| -   |         |

#### Added functions

SET :Sets all data to "HIGH". (Usable for preheating, etc.)

OR-ON :Set at "HIGH" when considering the adjoining of the previous columns; otherwise set at "LOW".

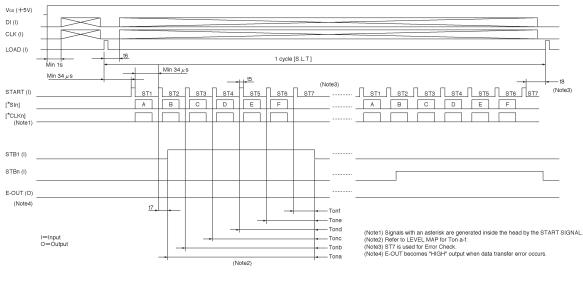

E-OUT :Outputs "HIGH" when a data transmission error occurs inside the head.

INC :Supports the increment function from level 1 to level 6. One level is incremented for one pulse. (See Fig. 2) RESET :Sets all data at "LOW". Clears data when printing is resumed after a pause. (See Fig. 2)

Note: Signals of SET, INC, START, and RESET detect the falling edge; the START signal transmits data to the driver IC at the falling edge and latches at the rising edge.

For two-part split printing, enter INC after 34  $\mu$  seconds of START7. (See Fig. 2)
